

NOX UI

Voice Launcher — User Guide & Reference

01 OVERVIEW

Nox UI is a voice-first Android launcher that replaces your default home screen with a minimal, command-driven interface. Instead of tapping icons, you speak — Nox UI listens, interprets, and executes. Designed for speed, accessibility, and distraction-free use.

02 KEY FEATURES

Voice-First Interface	Launch any app, make calls, or send messages entirely hands-free.
Minimal Home Screen	No widgets, no clutter — a single microphone prompt is your desktop.
Smart App Recognition	Fuzzy-matching understands partial names and common nicknames.
Quick Commands	Single-word triggers for frequent actions (call, open, play, search).
Accessibility Mode	High-contrast layout and large-text option for low-vision users.
Offline Recognition	Core commands work without internet using on-device processing.
Custom Wake Word	Set a personal trigger phrase to activate listening passively.

03 VOICE COMMANDS

Speak clearly after the wake prompt. Commands are case-insensitive.

APP & NAVIGATION

"Open [app name]"	Launches the specified application immediately.
"Go home"	Returns to the Nox UI home screen from anywhere.
"Recent apps"	Opens the Android recents / task switcher.
"Settings"	Jumps directly to Android system settings.
"Close"	Closes the currently active application.

COMMUNICATION

"Call [contact]"	Initiates a phone call to the named contact.
------------------	--

"Text [contact] [msg]"	Sends an SMS to the contact with dictated message.
"Email [contact]"	Opens compose screen pre-filled with recipient.
"WhatsApp [contact]"	Opens WhatsApp chat for the contact (if installed).

MEDIA & WEB

"Play [song/artist]"	Streams via default music app or YouTube Music.
"Pause / Resume"	Controls playback of active media session.
"Search [query]"	Opens browser with Google search results.
"YouTube [query]"	Searches YouTube directly for the query.
"Volume up / down"	Increments media volume by one step.

SYSTEM SHORTCUTS

"Flashlight on/off"	Toggles the camera torch.
"Bluetooth on/off"	Toggles Bluetooth adapter state.
"Wi-Fi on/off"	Toggles Wi-Fi adapter state.
"Screenshot"	Captures the current screen.
"Alarm [time]"	Sets a one-time alarm at the spoken time.
"Timer [duration]"	Starts a countdown timer.
"Battery"	Reads aloud current battery percentage.

04 HOW TO USE

1. Set as Default Launcher

Go to Settings → Apps → Default Apps → Home App and select Nox UI. Your home button will now open Nox UI.

2. Grant Permissions

Allow Microphone, Phone, Contacts, and SMS permissions when prompted. Without these, voice commands will be limited.

3. Activate Listening

Tap the mic icon on the home screen, or use your custom wake word if passive listening is enabled in Settings.

4. Speak Your Command

State a command clearly. A visual pulse confirms Nox UI is listening. The action executes immediately on recognition.

5. Adjust Sensitivity

In Nox UI Settings → Voice Sensitivity, tune the threshold to reduce false triggers in noisy environments.

6. Custom Aliases

Assign shortcuts like 'my bank' → open a specific app via Settings → Custom Commands.

05 ADVANTAGES & CONSIDERATIONS

Advantages	Considerations
• Completely hands-free operation • Faster app launching than icon tapping • Ideal for accessibility needs • Minimal battery impact (offline core) • Reduces screen-time distraction • Customisable with aliases & wake word	• Requires clear speech in quiet environments • Initial permission setup can feel extensive • Less visual discovery for new users • Passive listening increases mic usage • Third-party app support may vary • Learning curve for full command set

06 PRO TIPS

- Speak the app's exact name for fastest recognition — avoid filler words.
- Chain commands: 'Call Mum on speaker' works as a single utterance.
- Use 'Help' as a voice command to hear a spoken list of all commands.
- Enable *Driving Mode* in settings for larger buttons and auto-read notifications.
- Long-press the mic icon to access the full settings menu quickly.
